

Solution Architecture - AI Powered Customer Support and Service Automation

The solution architecture connects customers, AI services, and business systems to automate customer support. Objectives: provide 24/7 AI chatbot support, automate ticketing, integrate CRM and knowledge base, enable escalation to human agents, and monitor performance. Architecture Flow: Customer -> Website/Mobile/WhatsApp/Email -> AI Chatbot -> NLP/LLM -> Knowledge Base + CRM + Ticket Management -> Response Engine -> Customer; complex issues -> Human Agent; Analytics monitors all interactions. Benefits: Faster responses, improved customer satisfaction, reduced operational cost, scalable and secure support.
